 NL PT SE
- (30) Priority: 19.07.1996 US 686801
- (71) Applicant: TEXAS INSTRUMENTS INCORPORATED Dallas Texas 75265 (US)

- (72) Inventor: Wu, Song Dallas, Texas 75243 (US)
- (74) Representative: Darby, David Thomas et al Abel & Imray,
 20 Red Lion Street
 London WC1R 4PQ (GB)
- (54) Multimode modem, and protocols therefor
- (57) A modern is provided, which can operate either in voiceband or in higher frequency bands, and which supports several modulation types, such as multicarrier modulation, or carrierless amplitude/phase modulation. The modern uses a digital signal processor, so that different ADSL modulation types can be implemented using the same hardware. Startup and negotiation procedures are also provided. The startup for carrierless am-

plitude/phase modulation allows reliable synchronisation over channels, such as the standard telephone twisted pair lines, which suffer from sever amplitude distortion. In a multicarrier system, the transmitter contains a filter, which is adapted to reduce the effective length of the channel impulse response; the filter uses a combination of convolution in the time domain, and multiplication in the frequency domain, so as to reduce the algorithmic complexity.

ANNEX TO THE EUROPEAN SEARCH REPORT ON EUROPEAN PATENT APPLICATION NO.

EP 97 30 5343

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
